

## Malware and Cleanup

This research paper will be going into several types of malwares used to attack systems and networks, and ways to clean up malware. I will also be looking at large scale attacks from several types of malwares to really see how they get started and how they were eventually dealt with after their damage was done.

### - Goals

My goal for this paper is to research the diverse types of malwares used in the history of technology. Alongside this I want to investigate how people deal with these attacks and purge the malware from their system or network. To see the damage some of these malwares can cause I want to look at some of the large-scale attacks done by several types of malwares to see the damage that was done, and the methods used to clean it up.

### - Resources

For the resources I plan to use, include a vast array of places. Most of my research will come from a variety of sources from the internet, as I plan to look at articles, videos, and other papers to gather information. I can also use the library to see if there is any literature to assist me.

### - Methods

For my methods I plan to use include literature reviews, reviewing case studies, using databases, and browsing forms. I might end up using more types when I come across them.
